

i-mop

revolutionary cleaning

DON'TS

- Must empty dirty water tank when clean water tank has been emptied (This will avoid damage to vacuum motor)
- Must not lower handle right down to the floor. (some customers lower the handle down to collect the head instead of pulling the head up) again this will avoid vacuum motor damage
- Must not drop head down. Please place down
- Must not use any gel or high foaming chemicals
- Must not use boiling water through machine this can damage solenoid valve

DO'S

- Once per week remove vacuum filter (yellow filter which fits into the dirty tank) and remove any debris (again this is good for the vac motor)
- Charge the batteries after every use
- Remove the batteries from charger once they are fully charged
- Clean squeegee, brushes and base after every use
- Close dirty water tank lid otherwise you will have no suction
- Ensure dirty water tank is correctly seated in position otherwise again you will have no suction
