3D TOILET CLEANER

STAINLESS STEEL TOILET AND URINAL CLEANER

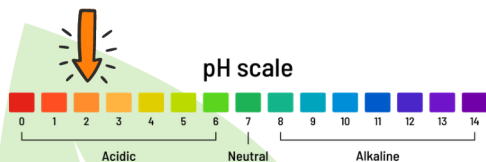

- Strong Descaling Action
- Stainless Steel
- Under-Rim Nozzle

Description:

ProJanta 3D Stainless Steel Toilet Cleaner is a powerful toilet cleaner and descaler developed for use on toilets and other ceramic surfaces, while also being safe for stainless steel. Designed to tackle stubborn deposits effectively, it is ideal for maintaining cleanliness in toilet bowls, urinals and sinks where scale and build-up can affect hygiene and appearance. The strong descaling formula helps restore surfaces while leaving behind a distinctive Parma violets fragrance for a fresher finish after use.

Available in both 1-litre squeeze bottles and 5-litre bulk containers, it offers flexibility for different cleaning routines.

Directions:

3D Stainless Steel Toilet Cleaner should be applied directly to the surface for effective descaling and deep cleaning of toilets, urinals and sinks. For toilet bowls, remove the cap and direct the nozzle under the rim at the water outlets, then apply the product evenly around the bowl above the water level and leave for 5 minutes before brushing any stubborn stains. For stains below the water line, force the water around the S bend with a toilet brush and apply the product in the same way. For urinals, apply evenly across the surface, scrub stained areas with a brush and allow the product to flush away automatically.

For sinks, wear protective gloves, insert the plug, apply carefully to taps and spread evenly around the inside of the sink, allow a few minutes for the product to react, then agitate with a cloth or sponge before removing the plug and rinsing thoroughly with clean water. Rinse brushes and cleaning tools well after use.

Useful Information:

Product Code:	1080 / 1085
Product Colour:	Blue
Product Fragrance:	Parma Violets
pH Level:	2
Alternative Sizing:	1L, 5L
