## SANI-DIP

### SANITISER DISINFECTANT CONCENTRATE

-  Hygiene Sensitive
-  Highly Dilutable
-  Powerful Formula

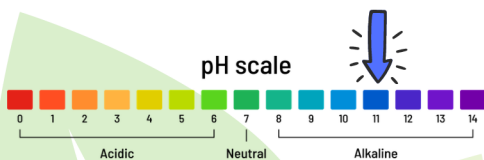

## Description:

ProJanta Sani Dip Sanitiser 5L is a broad-spectrum surface disinfectant developed for use in hygiene-critical environments where effective sanitising is essential. Designed to be diluted before use, it provides flexible application across a range of settings when used at the correct rate. For best results, heavily contaminated surfaces should first be cleaned with a suitable degreaser before the sanitiser is applied. A 10-minute contact time is recommended where there is heavier build-up, helping to support thorough disinfection. Suitable dilution rates include 1:24 for medical and animal areas and 1:100 for food production environments, making it adaptable to different hygiene requirements. Supplied in a 5-litre pack, it is intended for use through your preferred dispensing method. Always handle with care and wear appropriate PPE.

## Useful Information:

Product Code:	12017
Product Colour:	Pale Yellow
Product Fragrance:	Characteristic
pH Level:	11

## Directions:

Sani Dip Sanitiser should be used on pre-cleaned surfaces to ensure effective disinfection in hygiene-critical environments. Where surfaces are heavily contaminated, first clean thoroughly using a heavy degreaser product before applying the sanitiser. Dilute the product according to the area of use, using 1:24 for medical and animal areas and 1:100 for food production areas, then dispense through your preferred application method and apply evenly to the surface. For areas with heavier build-up, allow a contact time of 10 minutes for best results before further handling.

When using the product, wear protective gloves, wash hands thoroughly after handling, and keep the product out of reach of children.
