SHINE WET LOOK FLOOR POLISH

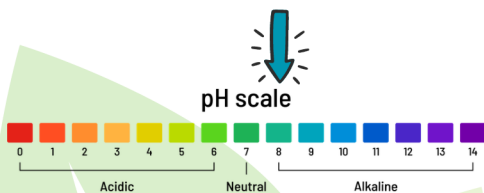

-  Strong Polymer Film
-  Wet Shine Finish
-  Suitable for Wide Range of Floors

Description:

ProJanta Shine Wet Look Floor Polish is a high solids polymer floor sealer and polish designed to deliver a deep, attractive wet look finish while providing excellent slip resistance. Formulated with thermoplastic polymers, it creates a protective film that becomes tougher and shinier with repeated buffing, helping to extend the life of the polish and maintain floor appearance over time. The first coat acts as a sealer, the second develops the gloss, and a third coat can be applied where an even higher shine is required.

Suitable for PVC, linoleum, rubber, sealed cork, sealed wood, thermoplastic floors, asphalt, terrazzo, marble and stone, it offers versatile performance across many hard floor types.

Directions:

Shine Wet Look Floor Polish should be applied only to a thoroughly cleaned floor that is free from previous polish layers, dirt and residue. Before use, strip away any existing polish and allow the floor to dry completely. Apply the product in a thin, even coat using a polish applicator or clean lint-free mop, ensuring full and consistent coverage across the surface. Allow the first coat to dry fully before applying a second thin coat to build gloss and protection. For the best finish, burnish the floor after application, and where a higher gloss level is required, a third coat may be applied once the previous coat has dried. Suitable for use on PVC, linoleum, rubber, sealed cork, sealed wood, thermoplastic floors, asphalt, terrazzo, marble and stone.

When handling and using the product, suitable protective gloves and eye protection should be worn, and the product should be stored in a cool, well-ventilated place after use.

Useful Information:

Product Code:	2002
Product Colour:	White
Product Fragrance:	Ammonia
pH Level:	7 - 9
