PURITY | POWER | PERFORMANCE

## SHINE FLOOR POLISH

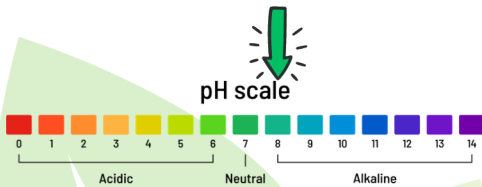

-  Non-Yellowing
-  High-Durability
-  Powerful Formula

## Description:

ProJanta Shine is a metallised emulsion floor polish formulated to deliver outstanding strength, durability and a deep, professional finish. It forms a tough, non-yellowing polymer film that helps protect floors without discolouring even lighter surfaces, making it suitable for maintaining a clean, bright appearance over time.

Designed to provide excellent slip resistance and respond well to spray burnishing, it is ideal for environments where both appearance and performance matter. Compared with many high-durability polishes, it also offers easier removability when maintenance is required.

## Useful Information:

Product Code:	2003
Product Colour:	White
Product Fragrance:	Sweet Smelling
pH Level:	7 - 9

## Directions:

Shine should be applied only to a clean, grease-free floor to achieve the best level of gloss, durability and protection. Before application, thoroughly clean the floor and remove any previous polish layers using a suitable alkaline stripper, then rinse thoroughly with clean water and allow the surface to dry completely. Apply the product in a thin, even coat using a polish applicator or clean lint-free mop, ensuring consistent coverage across the floor. Allow the first coat to dry for approximately 30 minutes before applying a second thin coat. Where a higher gloss level is required, a third coat may be applied once the previous coat has dried.

Burnish or buff as required to enhance shine and maintain the finish. When handling and applying the product, suitable protective gloves and eye protection should be worn, and the product should be stored in a well-ventilated place after use.
