ELITE FABRIC RINSE ACIDIC NEUTRALISER FOR CARPET CLEANING

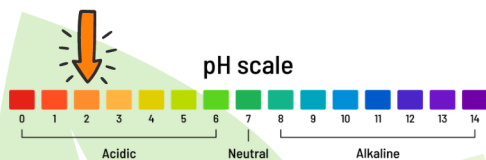

- Neutraliser
- Non-foaming
- Protects Colours

Description:

ELITE Fabric Rinse 5L is a specialist acidic rinse formulated for use after carpet and upholstery extraction cleaning to neutralise alkaline detergent residues. Designed to be applied through a soil extraction machine, it helps support a cleaner, more even finish by stabilising colours and reducing the risk of yellowing or browning in carpet fibres. This makes it a valuable final step in the extraction cleaning process, particularly where appearance and colour retention are important. Used after the normal cleaning and pre-spray procedure, it helps leave fabrics and carpets looking fresher and more professionally finished. The product should be pre-diluted at 1:80 before use.

Suitable for professional carpet and upholstery care, it should always be pre-tested for colour fastness. Handle carefully and wear eye protection during use.

Directions:

Fabric Rinse should be pre-diluted at a ratio of 1:80 before use and applied through a soil extraction machine as a rinsing agent following the normal cleaning and pre-spray process.

The product is designed to neutralise alkaline detergent residues after carpet and upholstery cleaning, helping to stabilise colours and reduce the risk of yellowing or browning of fibres for a cleaner, more even finish. Before use, always test the fabric for colour fastness on a small, inconspicuous area. Suitable for use on carpets and upholstery during professional extraction cleaning procedures.

When handling and using the product, appropriate eye protection should be worn, hands should be washed after use, and the product should be kept out of reach of children.
