ELITE EXTRACTION CLEAN CARPET AND UPHOLSTERY CLEANER

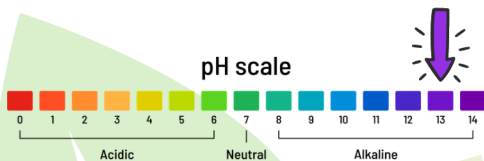

- High Dilution Rate
- Low-foaming
- High Concentrate

Description:

ELITE Extraction Clean 5L is a professional carpet and upholstery cleaner developed for use with spray extraction machines. Designed to clean and refresh carpets, upholstery and other water-tolerant materials, it helps revitalise fibres and improve overall appearance in a wide range of commercial and domestic settings. Its concentrated formula provides effective cleaning performance when diluted for normal use, making it suitable for routine extraction cleaning as part of a regular maintenance programme. For best results, heavily soiled areas should be pre-treated with a suitable traffic lane cleaner before extraction, with a fabric rinse used afterwards to help complete the cleaning process.

Supplied as a green-blue, pleasant-smelling liquid that is soluble in water, it is typically diluted at 1:80. Always test for colour-fastness before use and do not apply to materials requiring dry cleaning.

Useful Information:

Product Code:	2535
Product Colour:	Teal
Product Fragrance:	Floral
pH Level:	13

Directions:

Extraction Clean should be used with a professional spray extraction machine for the deep cleaning of carpets, upholstery and other water-tolerant materials. Before application, thoroughly vacuum the area to remove loose dirt and debris. For heavily soiled areas, pre-spray with a suitable traffic lane cleaner solution such as Elite Traffic Lane Cleaner before extraction. Dilute the product at 1:80 for normal use and apply through the extraction machine in accordance with the machine's operating method. For best results, complete the process by extracting or rinsing with Elite Fabric Rinse. Always carry out a colour-fastness test on a small, hidden area before use by applying a small amount of diluted solution with a white cloth; if colour transfers, do not proceed. Do not use on materials that are designated for dry cleaning only. When handling and using the product, suitable protective gloves, eye protection and protective clothing should be worn.

After use, keep the container tightly closed and store in a cool, well-ventilated area.
