## ALGAE KILL BIOCIDAL CLEANER

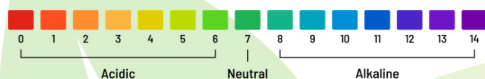

-  Low Toxicity
-  Water Soluble
-  Powerful Biocides

## Description:

ProJanta Algae Kill 5L is a specialist cleaner and algae remover developed for use on pathways, patios and swimming pool surrounds. Designed to clean and disinfect hard surfaces, it helps control algae and other contaminating organisms on floors and walls, making it suitable for a wide range of outdoor and wet-area applications. Its formula combines three active biocides chosen for broad-spectrum performance, while also offering low toxicity and low odour in use. This makes it a practical option for swimming pool areas, equipment, tanks and similar hard surface environments. Supplied as a yellow, water-soluble liquid with a concentrate pH of 6-8, it can be applied by hand or machine. For best results, do not mix with other chemicals.

  
pH scale

## Directions:

Algae Kill should be diluted at a rate of 1:100 with clean water before use, using either hot or cold water as required. Apply the diluted solution by hand using a mop, spray or scrubbing brush, or through a suitable scrubber machine, ensuring even coverage across the affected hard surface. It is suitable for use on pathways, patios, swimming pool surrounds and other hard-surface areas including equipment, tanks, floors and walls where algae contamination is present.

For heavier contamination, a stronger dilution may be used if the standard 1:100 rate does not prove effective. Do not mix with other chemicals or cleaners. When handling and applying the product, suitable protective gloves and eye protection should be worn.

## Useful Information:

Product Code:	6406
Product Colour:	Yellow
Product Fragrance:	Odourless
pH Level:	6 - 8
